

What Do I Need To Know About A Medicine?

The goal of this tutorial is to help students appreciate the principles of clinical pharmacology and how they contribute to rational prescribing of medicines.

The tutorial group is asked to suggest what they think they should learn about a medicine in order to use medicines safely and effectively.

These ideas are then linked to the MBChB 221B clinical pharmacology module so that students can appreciate what they are taught and why this is helpful to become a competent doctor and prescriber.
